Profile

Python Engineer with experience across financial services and logistics, and a growing research track record in applied machine learning. Comfortable moving between shipped engineering work and independent research. From financial data pipelines at JPMorgan to a self-directed ML research project using interpretable models (Random Forest, SVM, XGBoost) taken toward conference submission.

Education

MPhil in Human Inspired AI, University of Cambridge

Oct 2026

BSc (Honours) in Computing Science (First Class), University of Glasgow

June 2024

Course Highlights: Computer Systems, Databases, Human-Computer Interaction, Computer Vision and Machine Learning.

Research and Technical Projects

Human-Inspired AI Research, MPhil, University of Cambridge (Starting Oct 2026)

Beginning an MPhil in Human-Inspired AI at Cambridge, with a dissertation topic to be confirmed once the programme begins.

Machine Learning Public Speaking Coach, BSc Dissertation (2023-2024)

Independent research project ranking public speech quality from audio features using machine learning.

1. Extracted acoustic features (e.g. pitch, pacing, energy) from recorded speeches using the openSMILE library, and trained interpretable models – including Random Forest, SVM, and XGBoost – to score speech quality.
2. Designed and built a full-stack Python web application (Django, HTML/CSS, Bootstrap 5) allowing users to record or upload speeches for automated analysis; deployed on PythonAnywhere.

Awarded an A3 (79–84%); began drafting a paper for conference submission based on the application and success from user research. [Repo](#)

Sensing and Audio ML Team Project, CENSIS, University of Glasgow (2022-2023)

Third-year team project delivered through CENSIS, Scotland's national innovation centre for sensing, imaging and IoT technologies.

1. Applied machine learning to classify sounds captured by a microphone deployed in social housing, to help protect residents.
2. Acted as Scrum Master, leading and coaching the team through sprints.
3. Contributed to C/Arduino firmware for an ESP32 device and implemented FFT-based signal processing on live microphone data.

Professional Experience

Software Engineer (Analyst), JP Morgan Chase, Glasgow

Feb 2025 – Current

Develop Python-based applications and data pipelines supporting **valuation control, valuation adjustment and risk analysis**, primarily across **CEM-FXO, CPG and Credit**.

1. Develop Python applications and data pipelines for financial data ingestion, transformation, analysis, persistence and reporting, using GitHub **Copilot** to support development.
2. Lead onboarding of new products into the consensus pricing workflow, integrating QR pricing code and coordinating across VCG Business, dependent technology teams and VCG QR, including establishing processes for vendor submission, calibration and **Independent Price Verification (IPV)**.
3. Develop unit tests and support production issue resolution across financial and data-processing workflows.

Make-A-Wish UK – Force for Good: Developed a Salesforce portal to improve charity wish management.

SEP Committee Treasurer: Planned and budgeted EMEA events for JPMC Early Careers, **15+ Events, 600+ Attendees**.

Program Manager Intern, Amazon, London

June 2024 – Nov 2024

Worked in the EU ROC Performance Improvement Team within Amazon Transportation Services (ATS), leading projects to optimize the EU transportation network.

1. Using SQL, ETL Manager, and QuickSight, I created dashboards to visualise transportation metrics, conducted in-depth data analysis to identify inefficiencies and disruptions.
2. I developed Python scripts to audit transportation data, flagging EU-wide disruptions and ensuring timely resolution of issues impacting the network.
3. I implemented proactive JavaScript tools that enhanced compliance on Amazon's transportation platform.

Some of these projects had entitlements of over £10MM, demonstrating the scale and operational impact of my work.

Quantitative Sector Lead, Glasgow University Trading and Investment Club Fund

Feb 2024 – June 2024

Led the development of quantitative trading strategies by leveraging statistical models.

Provided training and guidance to Quant Analysts within the GUTIC Fund, including teaching quantitative analysis techniques, financial modelling, and Python for financial analysis.

Assistant Demonstrator, University of Glasgow

Sept 2023 – June 2024

Main Programming language in courses: **Python**

Provided hands-on lab support, guiding students through exercises and troubleshooting programming issues.

Simplified complex programming concepts for students, enhancing their problem-solving and debugging skills.

Fostered a supportive learning environment, encouraging perseverance and innovation in computational thinking.

Technology Operations Intern, Student Loans Company, Glasgow

June - Sept 2023

Worked with the Service Management, Performance Reporting, Performance Improvement teams to produce over 25 automated dashboards, covering nearly all technology services within the organization.

Courses completed (Pluralsight): IT Governance Foundation, Azure Fundamentals Course, Microsoft Power BI Course

Tax Assistant, RSM, Edinburgh

Aug 2018 – Dec 2019

Prepared tax returns and computations for a portfolio of individuals, trusts, and companies, ensuring accuracy and compliance with regulations. This involved managing complex financial data and liaising with key stakeholders to meet deadlines and address any queries. Completed Foundation Diplomas in Business Taxation and Personal Taxation (Association of Taxation Technicians)

Additional Interests

Music and Drama

I have been performing since the age of 6 and have been on stage as a principal performer as well as chorus member at some of the UK's largest theatres. Taking part in theatre has developed my confidence in working with others and has also enhanced my ability to perform well under pressure, especially when singing to large audiences.

Hackathon Achievements:

2024 Amazon GenAI (Internal) Hackathon 4th Place

Our six-person team's idea was chosen among the top 25, earning us an invitation to present at a live event, where we placed 4th. I led the technical team, to develop a prototype for demonstration and an create an internal plan to expand the idea.

2023 CENSIS/Quorum Cyber: Secure futures for Healthcare Technologies: Ideas Hackathon 1st Place

Working in a small team I Implemented machine learning algorithms in python to detect cyber-attacks using Wireshark data.

2022 and 2023: Consecutively 1st Place in the GUTS Hackathon for Verint Systems.

2023: as part of a 3-person team, I developed a Unity game motivating eco-friendly lifestyle change.

2022: as part of a 5-person team, I created a Unity game in C# with the goal "creating a fun game that can be played by anyone."
